XML message for Payment Initiation
Implementation Guideline

Version 1.05, valid from 19.11.2017
Version 1.05 Changes – Updated 20171017

Customer Payment Status Report:
1) PartyIdentification message elements Identification, OrganisationIdentification and BICOrBEI are added under the message element Originator (index 2.8; 3.6; 3.21).
2) Examples of Customer Payment Status Reports are updated with PartyIdentification message elements Identification, OrganisationIdentification and BICOrBEI under the tag Orgtr.

Version 1.05 Changes – Updated 20170814

Customer Credit Transfer:
1) Message element name is changed to Customer Credit Transfer Initiation in message root block.
2) SEPA format rule “The fractional part has a maximum of two digits” is added to message element Control Sum (index 1.7; 2.5).
3) Message element Control Sum (index 1.7; 2.5) and Number of Transactions (index 2.4) are changed from optional to mandatory with SEB specification “Starting from 20.11.2017 SEB will check the correctness of this value”. This change is related to SEPA Credit Transfer Scheme Customer-to-Bank Implementation Guidelines version 1.0.
4) New message element Proprietary is added to Organisation Identification and Private Identification under message element Scheme Name and thus the mult.of message element Code under the Scheme Name is changed to (((Or (index 1.8; 2.19).
5) The following changes are made to index 2.21 Debtor Agent:
   - Specification “AT-06 BIC code of the Originator Bank” and SEPA usage rule “Only BIC is allowed” are deleted under message element Debtor Agent;
   - SEPA usage rule “Either BIC or ‘Other/Identification’ must be used” is added to message element Financial Institution Identification;
   - Message element BIC is changed from mandatory to optional;
   - Specification AT-06 BIC code of the Originator Bank and SEPA usage rule “Only mandatory when Originator Bank is located in a non-EEA SEPA country or territory” is added to message element BIC;
   - Message elements Other and Identification are added. SEPA usage rule “Only ‘NOTPROVIDED’ is allowed” is added to message element Identification.
6) SEPA usage rule “If the BIC is not indicated ‘Creditor Agent’ structure is not to be used” is added to index 2.77 Creditor Agent.
7) The following changes are made to index 2.79 Creditor:
   - Estonian usage rule “For RUB payments to Russia ‘Other’ is allowed two occurrences and should be used for entering INN and KPP codes” is added to message element Private Identification;
   - Estonian usage rule “For RUB payments to Russia, INN and KPP codes should be entered here” is added to message element Identification of Private Identification;
   - Message element Proprietary is added under Scheme Name of Private Identification with Estonian specification “For RUB payments to Russia, INN and KPP codes should be entered here”.
8) Estonian usage rule “Information needed by Estonian Central Bank” under message element Regulatory Reporting (index 2.89) is deleted.

Customer Payment Status Report:
1) Message root block is added with message element Customer Payment Status Report and headlines of Group Header and Original Group Information and Status are adjusted accordingly.
2) New message element Originator is added under Status Reason Information with specification “Identification of the Type of Party that initiated the reject. Limited to BIC to identify the bank or CSM originating the status or ‘Name’ to indicate a CSM when it has no BIC. ‘Name’ is limited to 70 characters in length. The Party that issues the status” (index 2.8; 3.6; 3.21).
3) Message element Reason of Status Reason Information is changed from optional to mandatory (index 2.9; 3.7; 3.22).
4) New message element Proprietary is added to Organisation Identification under message element Scheme Name and thus mult. of message element Code under the Scheme Name is changed to {{{Or (index 3.121).
5) New message element Proprietary is added to Private Identification under message element Scheme Name and thus mult. of message element Code under the Scheme Name is changed to {{{Or (index 3.121; 3.127).
6) Index 3.99 of message element Structured is aligned with ISO 20022 standard and changed to 3.90.
7) Examples of Customer Payment Status Reports are updated with new mandatory tag Orgtr with value EEUHEE2X.

Character set:
1) The character set has been updated with additional information according SEPA rules: “References, identifications and identifiers must respect the following: Content is restricted to the Latin character set as defined above. Content must not start or end with a ‘/’. Content must not contain ‘//’s.”

Version 1.04 Changes – Updated

1) Baltic Online service (BOL) payment initiation usage added for payment import in internet bank.
2) Baltic Online service (BOL) payment examples initiated from Latvian account in Estonian internet bank
3) Baltic Online service (BOL) payment examples initiated from Lithuanian account in Estonian internet bank
4) Changes in tag 2.77- the SEB specific rules are changed: Creditor’s agent information is mandatory when creditor agent locates outside EU/EEA. Creditor’s bank BIC required when payment is sent outside EU/EEA.

Version 1.03 Changes – Updated 20140530

1) Initiating Party (pain.001.001.03 tag 1.8) is ignored by SEB Pank
2) All SEB specific rules that described payment message processing before 01.02.2014 are removed
3) Tag 2.29 InstrId has been complemented with SEB specific rule that this field corresponds to document number and it is forwarded to the creditor’s bank only in case of European payment
4) SEB specific rule under tag 2.44 Equivalent Amount is changed – SEB will not accept equivalent amount at all
5) SEB specific rule under tag 2.19 Debtor is added – SEB will take debtors’ name, address or ID from SEB’s customer database and will forward this information to the Beneficiary Bank
6) Following comment added to tag 2.89 Regulatory reporting: starting from 01.02.2014 regulatory reporting is not needed by Estonian Central Bank. If used, then it will be ignored
7) XML escape characters are added in chapter 5

Version 1.02 Changes – Updated 20131211

1) SEB specific rule added under tag 2.44 Equivalent Amount
2) To the tag 2.89 “Regulatory Reporting” added comment that from 02.01.2014 Estonian Central Bank does not require the declaration of payments.
Version 1.01 Changes – Updated 20131010

1) New column “XML Tag” added to the Customer Credit Transfer and Payment Status Report tables
2) SEB specific rules are changed under tags 2.9 and 2.34
3) SEB specific rules under Local Instrument tags 2.12, 2.13, 2.37 and 2.38 are deleted.

1. Introduction

The purpose of this document is to provide guidance on the use of XML Customer Credit Transfer Initiation message ISO20022 XML – pain.001.001.03 sent to SEB and Customer Payment Status Report message- pain.001.001.03 sent by SEB in Host to host banking interface. This document is based on the Estonian implementation guidelines for Payment Initiation and it has been complemented with SEB specific rules and examples. If the originator of the message has stated message elements that are not represented in this document or not relevant to a specific payment type, it will be viewed as data overpopulation and will be ignored.

This document should be read together with the ISO 20022 XML message standards, as the ISO rules on the usage of the elements have not been repeated in this document and should be taken into account where applicable.

SEB will accept XML message for Payment Initiation from Host to host banking interface and Business Internet Bank from October 1st 2013.

Baltic Online service payment initiation in ISO 20022 XML format is possible via internet bank payment import
BOL RUB payment import is not supported.
BOL batch booking functionality is not supported.

2. Message content of the Customer Credit Transfer

The message consists of two mandatory building blocks: Group Header and Payment Information.

**Group Header:** This block is presented only once and it contains elements such as Message Identification, Creation Date and Time and Initiating Party.

**Payment Information:** This block is repetitive and it contains elements related to the debit side of the transaction, such as Debtor, Debtor Account, Payment Type Information and Requested Execution Date and also one or several Credit Transfer Transaction Information parts which contain elements related to the credit side of the transaction, such as Creditor, Creditor Agent and Remittance Information.

The message is described in the following table. Below is the explanation of each column of the table.

"Index" column – number refers to the corresponding description in the ISO 20022 XML Message Definition Report. This report can be found at [www.iso20022.org](http://www.iso20022.org) under "Catalogue of ISO 20022 messages" with "pain.001.001.03" as reference.

"Mult" column - indicates whether an element is mandatory or optional and how many repetitions are allowed for the element.

For example:

- [1..1] – shows that element is mandatory and can be presented only once
- [1..n] - shows that element is mandatory and can be presented 1 to n times
- [0..1] – shows that element is optional and can be presented only once
- [0..n] – shows that element is optional and can be presented 0 to n times
- {Or…Or} – indicates that only one of several elements may be presented
“Message Element” column - element name used in ISO 20022 XML Message Definition Report.
“XML Tag” column – short name identifying an element within an XML message, which is put between brackets, e.g. <Amt>

“SEPA Core Requirements with Usage Rules” column – message elements shaded in yellow means that these elements can be used for executing SEPA core payments. If there are differences in using a message element specified in the ISO 20022 XML standard in SEPA payments, they are pointed out as Usage Rules.
“Estonian Requirements for payment initiation XML messages” column – includes SEPA payments as well as other payments. There is a short description of elements and if in Estonian Requirements for payment initiation XML messages there are differences in using the message elements specified in the ISO 20022 XML standard or in SEPA Core Requirements or the same Usage Rule applies as in SEPA Core Requirements, they are pointed out as Usage Rules. SEB specific rules are also pointed out in this column with bold and italic text.

3. Content of Customer Payment Status Report

AS SEB Pank sends Payment Status Report only if Payment transaction is sent via host to host banking interface and only if single transaction is rejected. In other cases, for example for notifying the receipt or non-receipt of the file, for notifying how many transactions were created, the same message will be sent as today in host to host banking interface.

Payment Status report consist of three building blocks.

**Group Header:** This building block is mandatory and presented once. It contains elements such as Message Identification and Creation Date Time provided by the bank.

**Original Group Information and Status:** This building block is mandatory and presented once. It contains elements such as OriginalMessageIdentification, OriginalMessageNameIdenification, and GroupStatus.

**Original Payment Information And Status:** This building block is optional and repetitive. It contains elements referencing the original instruction (for example OriginalEndToEndIdentification) and can contain an individual status for the original instructions and it may also transport a set of elements from the original instruction.

The message is described in the following table. Below is the explanation of each column of the table.

"Index" column – number refers to the corresponding description in the ISO 20022 XML Message Definition Report. This report can be found at [www.iso20022.org](http://www.iso20022.org) under "Catalogue of ISO 20022 messages" with "pain.002.001.03" as reference.

"Mult" column - indicates whether an element is mandatory or optional and how many repetitions are allowed for the element.

For example:

- `[1..1]` – shows that element is mandatory and can be presented only once
- `[1..n]` - shows that element is mandatory and can be presented 1 to n times
- `[0..1]` – shows that element is optional and can be presented only once
- `[0..n]` – shows that element is optional and can be presented 0 to n times
- `{Or…Or}` – indicates that only one of several elements may be presented

"XML Tag" column – short name identifying an element within an XML message, which is put between brackets, e.g. `<Amt>`

"Implementation Guide" – description of the field

### Message Root

</table>
Depending on bank, you may receive only one payment status report message or several messages. Where bank supports a file level based acknowledgement or consolidated acknowledgement that reports on the file, payment and underlying transactions depending on the level of processing that has been completed, only one payment status report will be issued. Where bank supports a transaction level acknowledgement you may receive more than one payment status report depending on the banks’ ability to generate a status update based on the various stages of internal processing. In case of partially accepted file, bank may report transaction status for every transaction or only for rejected transaction.

### Example 1

SEB has rejected one transaction in Payment 1 (see Payment examples in section 2.2) with reason that beneficiary’s account is incorrect

Example 2. SEB has rejected one transaction in Payment 3 (see Payment examples in section 2.2) with reason insufficient funds
4. Character set

The UTF8 character encoding standard must be used. However, only the Latin character set commonly used in international communication, is generally supported. It contains the following characters:
In addition, characters Ä, Ö, Ü, Ž, Š and ä, ö, ü, ž, š are allowed, however when a payment is transmitted to another bank, these characters may be replaced with A, O, U, Z, S and a, o, u, z, s, respectively.

References, identifications and identifiers must respect the following:

- Content is restricted to the Latin character set as defined above
- Content must not start or end with a '/'
- Content must not contain '//'

### 5. XML escape characters

& must be replaced as &amp;
'" must be replaced as &quot;
' must be replaced as &apos;
< must be replaced as &lt;
> must be replaced as &gt;
